## Liquid Plant Food Write Up

FCL Tote: 1000 Kg, 20 per container, 20/MT in 20 Ft container.

Liquid plant food 3-18-18 is used as a total P & K source for corn. Ten gallons applied in the row at planting can replace 90 – 100 units of  $P_2O_5$  and  $K_2O$  spread broadcast.

The nutrients in 3-18-18 are 100% available when applied in the row at planting. The nutrients from commercial fertilizer spread over a field are around 15% available.

A small tank or set of tanks are needed on the planter or tractor as a place to store the plant food. A small pump to deliver the plant food through a manifold delivers the 3-18-18 to each row.

The Liquid Plant Food 3-18-18 is non-corrosive and non-toxic. It will not corrode your equipment and has a Ph value of 7. We have been successful at foliar feeding soybeans and many other crops.
